a
By topic (n = questions × 2 images)
Synthetic data: 3D rendering & generative models (4)
Auditing classifiers / Clever Hans (2)
Multispectral / hyperspectral lesion imaging (2)
Lesion-body context & patient-level AI (6)
Adversarial / pixel perturbation attacks (4)
Monte Carlo light transport in skin (2)
Smartphone / consumer apps & teledermatology (16)
Pixel attribution in dermatology (saliency, Grad-CAM… (8)
Shortcut / artefact learning (markings, rulers, hair) (30)
Total body photography & 3D TBP (20)
Photoaging scales & image grading (32)
Fairness & skin-tone bias (6)
Histopathologic correlates of dermoscopic structures (12)
Skin of colour presentation (18)
Anatomic site & body-region lesion density (12)
Congenital nevi & vascular anomalies/birthmarks (22)
Special sites (acral, face/LM, nail, mucosa) (126)
Skin surface texture & microrelief (16)
Inflammatory dermoscopy & general dermatology (72)
Melanin/haemoglobin decomposition of RGB images (8)
Public datasets & challenges (16)
Clinical melanoma criteria (ABCDE, EFG, ugly ducklin… (20)
ILDS morphology / lesion terminology (40)
Dermoscopy terminology consensus (74)
Spitz / pink / amelanotic & paediatric lesions (30)
Dermoscopy algorithms for melanoma (60)
Keratinocyte tumour dermoscopy (BCC/SCC/AK/KA) (100)
Field cancerization & actinic damage scoring (20)
Nevus phenotypes / signature nevus / ugly duckling (10)
Distribution & configuration (Blaschko, segmental, m… (22)
Skin optical properties & chromophores (12)
Texture descriptors & radiomics for lesions (16)
Vascular structures in dermoscopy (42)
Colour constancy & acquisition standards (12)
Segmentation & handcrafted ABCD features (26)
Seborrhoeic keratosis & benign mimics (30)
Nevus count & atypical mole phenotype (18)
Skin tone measurement (Fitzpatrick, Monk, ITA) (20)
Concept-based explanations (8)
Domain shift, OOD & generalisation (4)
Saliency method validity (sanity checks, evaluation) (2)
